

PAULA ONUOHA

Software Developer – Specializing in Python, API-First Backend Systems

FCT Abuja, Nigeria • paulaonuoha07@gmail.com • (+234) 7066633852 • <https://www.linkedin.com/in/paula-onuoha-182a37240/>

PROFESSIONAL EXPERIENCE

SPAGRAM (EVU Inc.)

Software Engineer Intern.

Location: Remote/New York, NY

2026

As a Software Engineer, I designed, developed, and maintained high-quality software solutions that supported the company's products and services. My responsibilities included writing clean, efficient, and maintainable code, developing new features, integrating APIs and third-party services, troubleshooting technical issues, and optimizing application performance. I collaborated closely with product managers, designers, and fellow engineers to transform ideas into reliable software, participated in code reviews, and contributed to the continuous improvement, scalability, security, and stability of the platform.

SGSL SPABS (CONTRACT)

Lagos, Nigeria

Full Stack Developer

2025

- Developed and contributed to the web application, admin dashboard, and backend services, which increase the governmental job openings for tax agents.
- Led the development and launch of a major software update that improved system efficiency by 40%, resulting in reduced downtime and increased user satisfaction.
- Pioneered the implementation of automated testing procedures for backend development, leading to a reduction in bugs by 60% and speeding up the release cycle by 30%.
- Implemented a new server architecture that improved overall system performance by 35%, leading to increased efficiency in data processing and reduced downtime.

STARK-PAY BILLS (STARKNET BLOCKCHAIN)

FCT Abuja, Nigeria

Backend Developer

2025

- Developed a Go-based backend integrated with StarkNet, enabling decentralized utility payments for over 1,000+ users, including airtime, electricity, and cable TV.
- Built middleware connecting StarkNet smart contracts with 3+ third-party utility APIs, automating 90% of transaction processes from on-chain events to real-world bill payments.
- Ensured end-to-end security with JWT auth and wallet-based verification, preventing unauthorized transactions with 0% fraud rate during production testing.
- Reduced customer support requests by 25% after the introduction of a webhook-driven system for instant utility status feedback.
- Reduced API call latency by 35% through optimized Go routines and concurrent handlers for external payment providers (e.g., VTPass, Termii, Paystack).
- Implemented real-time StarkNet event listeners in Go, reducing payment confirmation time by 60% compared to polling methods.

BLEKIE TECHNOLOGIES LIMITED

DIFC, Dubai

Backend Developer

2024-2025

- Led the design and implementation of a scalable Python backend for a high-traffic fintech platform, efficiently managing over 10,000 daily transactions.
- Collaborated in a seamless migration of web applications to DigitalOcean, resulting in a 25% cost reduction and a 15% increase in application uptime.
- Implemented Docker-based microservices on a Linux server, resulting in a 40% reduction in system downtime and ensuring high stability of operations.

- Spearheaded payment API gateways implementations, leading to a 75% increase in successful transactions by enabling seamless transaction processing endpoint.
- Conducted and participated in code reviews, promoting a culture of excellence and improving code quality across the team.
- Revamped unit testing procedures, leading to a 40% decrease in critical bug occurrences post-launch.
- Refactor legacy Python services into Go, improving speed by 3x and reducing memory usage by 45%

NEXT CASH AND CARRY

FCT Abuja, Nigeria

FullStack Developer

2023-2024

- Contributed to mobile view development and resolved issues causing site crashes, elevating uptime to 90%. Efforts were key to a 27% increase in product sales.
- Reducing customer support calls by 50% by designing and launching a self-service knowledge base and interactive chatbot.
- Implemented an online payment service, achieving a 40% increase in customers' payment duration.
- Increased web traffic by 125% by improving search engine optimization, creating dynamic media sections, and adding social media plugins.
- Formulated SEO strategy as well as a mobile-friendly interface that resulted in the top 4 ranking e-commerce site in the country on Google and Yahoo search! Coupled with a 22% increase in annual sales.
- Created an email notification API to notify subscribed and registered customers of new products and services, including promotional codes.

VERTISPAY (CONTRACT)

FCT Abuja, Nigeria

Backend Developer

2023

- Developed 12+ high-performance backend services in Go, reducing response time by 40% on average.
- Over 30 RESTful and gRPC endpoints were built and maintained, supporting over 2,000 daily active users.
- Set up CI/CD pipelines that reduced deployment errors by 90% and cut release time from 1 hour to 10 minutes.
- Implemented JWT and PASTO-based auth APIs, securing over 10k user sessions daily.
- Reduced API latency from 300ms to 80ms by profiling and optimizing DB calls.
- Deployed to DigitalOcean using GitHub Actions and Docker Compose, enabling zero-downtime rollouts for 10+ environments.

EVER-GREEN EDUCATION SYSTEM (CONTRACT)

Anambra, Nigeria

Full Stack Developer

2022-2023

- Created an admission approval web application, achieving an 80% reduction in choosing qualified admitted students.
- Reducing parents' calls by 60% by designing a live chat web application, which helps in updating and solving parents' requests.
- Developed a web application, which corresponded to a 60% reduction in students' registration delay, including teachers' online attendance using a barcode scanner, which increased teachers' management by 90%.
- Developed a results management system, which helps the students to check their results using a given token.
- Resolved SEO strategy, which promoted the school's ranking to be among the top 3 on Google! coupled with a 60% increase in students' online payment requests.
